

# CT4 Handheld Computer

## **TOUGH • WATERPROOF • GORILLA GLASS**

Rugged computing experts offer economically priced, Dual-SIM, fully rugged, IP68-sealed 4.3-inch Android handheld designed for harsh environments.

Cedar targets the tough and outdoorsy looking Cedar CT4 as both a contemporary computing platform as well as a smartphone for the field. Running Android on a 4.3-inch multi-touch display, it can serve as the hardware for any number of existing field service, mapping, GIS, asset management and other field solutions apps. And it does so at a cost that's significantly lower than an unlocked consumer smartphone.

Just how much tougher is the Cedar CT4 than your typical consumer smartphone?

Quite a bit. Thanks to its much more rugged construction it can survive drops from up to ten feet, and it's also totally dustproof and waterproof. We're talking IP68 sealing, which means totally dustproof and also protected against full and extended immersion in water. The display is protected by Gorilla Glass from breakage and scratching.
